# Integra 32™ SOFTWARE MODULES

Visitor Management

General features

Welcoming visitors while insuring security of your facility can be challenging. To make this task easier, Integra32 makes available a powerful yet easy to use and feature rich Visitor Management module.
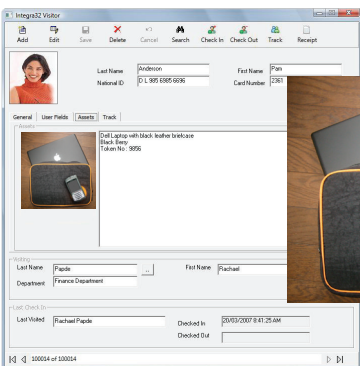

Here are just a few things it is capable of:

- Pre-registration and Quick look up
- Quick visitor check in and check out
- Issue pre-configured access cards
- Take pictures of the visitors
- Print visitor's photo ID badge
- Live tracking of visitor's card activity
- Define custom information fields
- Many additional features...

Reporting of visitor's logs and activities

While visitors are on the premises or long gone, there is a complete audit trail of their visit. You can produce a report based on Visitors log, searchable by visited department or employee, visitor's name or card number, etc. Find out which visitors currently are on premises , which readers they have used their cards on.

These reports can be viewed, printed or exported to one of many available file formats.

Track visitor's assets...

Security or industrial espionage policies at many facilities prohibits visitors from bringing certain items onto the premises. Weapons, cameras and mobile phones are just a few examples.

Integra32 simplifies asset detention procedure by linking items to visitors while providing them with a peace of mind by taking pictures of the items and issuing return receipts.

Available for a single workstation (VM1) or in a 5-pack (VM5)

Order p/n RBH-IRC-VM1 or RBH-IRC-VM5
